EDUCATION

The George Washington University Washington, DC
Bachelor of Science in Mechanical Engineering May 2026

- GPA: 3.08
- **Relevant Coursework:** Mechanical Systems Design, Mechatronics, Thermodynamics, Fluid Mechanics, Heat Transfer, Materials Science, Dynamics, Strength of Materials, Engineering Computations, Systems Engineering I

TECHNICAL SKILLS

Software: SolidWorks, AutoCAD, MATLAB, Python, Java, Microsoft Excel, Word, PowerPoint
Mechanical & Systems: Mechanical design fundamentals, statics and dynamics, basic controls, thermal/fluids concepts, tolerance and fit awareness, test fixture design
General: Technical writing, engineering documentation, presenting technical content to mixed audiences, collaboration on multi-disciplinary teams

RELEVANT EXPERIENCE

George Washington University Washington, DC
Teaching Assistant – MAE 1117: Introduction to Engineering Computations January 2026 - Present

- Support instruction in an introductory Python based engineering computations course, covering variables and types, logic, arrays, plotting, file I/O, and data handling.
- Hold office hours to help students debug code, interpret errors, and think through problem-solving strategies, reinforcing careful reasoning and clear documentation.

Falckon Aerial Company Washington, DC
Capstone Project: Autonomous Agricultural UAV System Team Lead August 2025 - Present

- Design mechanical components and assemblies in SolidWorks for an autonomous UAV platform, producing drawings and documentation suitable for fabrication and assembly
- Use Python to make scripts that will automatically generate flight plans for the UAVs to follow resulting in an easier user experience for the customer
- Collaborate with teammates from different disciplines, coordinate interfaces, and track requirements, design changes, and test results in shared documentation

National Institute of Standards and Technology
Summer Researcher June 2024 – August 2024

- Developed MATLAB scripts to analyze experimental datasets, automate calculations, compute metrics, and generate plots and summary statistics for engineering staff.
- Prepared concise technical summaries and visuals that communicated methods, findings, and limitations to researchers and supervisors

LEADERSHIP AND ACTIVITES

Chair, American Institute of Aeronautics and Astronautics - GW May 2025 – Present

- Lead a student chapter of 150+ members; coordinate multiple concurrent technical and professional events, manage communication with students and external speakers, and practice clear, accessible presentation of technical topics.

Robotics Instructor, UP Robotics August 2025 – Present

- Teach students fundamentals of mechanical design, basic programming, and hands-on prototyping; emphasize structured debugging and clear documentation
